EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Derek Jessen, Attorney for the Applicants on May 7, 2009, and on May 8, 2009.

The application has been amended as follows:

Claim 1 now reads as follows:

A probe for the measurement of the oxygen activity of metal melts, in particular steel melts,

comprising a reference substance in electrically conducting contact with a measuring device;

and comprising a solid electrolyte predominantly oxygen ion conducting at high temperatures and negligibly electron conducting and separating the reference substance from the melt and having an entry surface for oxygen ions in contact with the melt, and comprising a cover for the entry surface of the probe ready for operation wherein the cover is in the form of a foil arrangement and that the probe comprises

mechanical means for pressing the foil arrangement from outside into close contact with the entry surface.

In Claim 14, the term "mechanical" is inserted after the phrase "wherein said"; the phrase "comprise an elastomeric hose" is deleted; the term "surrounding" is now replaced with "surrounds"; and, the term "constituing" is now replaced with "constituting".

In Claim 15, the phrase "the hose" is replaced in both instances with the phrase "said mechanical means".

Claim 16 is cancelled.

In Claim 17, the term "producing" is now replaced with "producing".

2. The following is an examiner's statement of reasons for allowance: Independent Claim 1 now recites, *inter alia*, the probe comprises mechanic means for pressing the foil arrangement from outside into close contact with the entry surface. This invokes 35 USC 112, sixth paragraph. Therefore, this limitation can only be interpreted during examination as pertaining only to the corresponding structure, material or acts described in the specification, namely a hose of either thermoactive shape memory or

shape-memory material or equivalents thereof. In using this interpretation of claim 1, no prior art was found that anticipated all the limitations of the claim or fairly made obvious the limitations by combination of analogous teachings. The closest prior art found is KNEVELS et al. (US 2002/0100686 A1), which teaches limitations of claim 1, but does not teach a hose of either thermoactive shape memory or shape-memory material or equivalents thereof for holding the foil in close contact with the entry surface. No other prior art was found that rendered this claim as obvious to one of ordinary skill in the art.

Independent Claim 17 explicitly recites, *inter alia*, an elastomeric hose over the foil to hold the foil in close contact with the entry surface, which is also not taught or rendered obvious in the prior art. The closest prior art found is SURINX (Canadian Patent 1,173,505), which teaches a probe produced by tightly covering an entry surface for oxygen ions by a functional foil arrangement and a plastic jacket, however the plastic jacket even if take as an elastomer is on the inner surface of the foil (12 inside 8, Figure 2). No other prior art was found that rendered this claim as obvious to one of ordinary skill in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

3. Applicant's arguments, see Remarks, p. 8-10, filed February 12, 2009, with respect to all the claims have been fully considered and are persuasive. The rejections of the claims have been withdrawn.

Information Disclosure Statement

4. Two copies of an Information Disclosure Statement were placed in the file. Accordingly, only one copy was considered as they are duplicates of each other.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. CHRISTOPHER BALL whose telephone number is (571)270-5119. The examiner can normally be reached on Monday through Thursday, 8:00 am to 5:00 pm (EDT).
